3. If the number of fit wagons supplied by Railways is falling in the range given in Annexure-I the party will have to load all the wagons to avail trainload rate benefit.
4. In cases where even the minimum number of wagons qualifying for Block Rake cannot be supplied by the Railway against trainload indent due to shortage of wagons, operating or any other constraint arising out of unforeseen circumstances in a specific instance such as accident, blockade etc., the rail user(s) shall not be penalized. In such cases also, the benefit of trainload rate can be extended. However, detailed reasons for non-supply of all the indented number of wagons constituting a block rake should be recorded by the concerned Station Manager/ Yard Master, who in turn should get it confirmed in writing from at least a Gazetted Officer. The modalities for implementation of this instruction will be worked out jointly by Operating, Commercial and Accounts Department of the Railway depending on local conditions.
5. In cases where the load of block rake moving over a particular section is restricted below the minimum of the standard rake size due to operational constraints such as gradient, hauling capacity etc. then conditions stipulated at the bottom of Annexure I will apply regarding standard rake size.
6. In cases where rake is split up during transit due to gradient or other operational reasons but has fulfilled all other conditions for availing trainload rate at originating point, the trainload rate benefit shall be admissible.
7. Trainload rate benefit shall be extended to block rakes at the serving station by clubbing wagons loaded from more than one siding served by the same station or loaded partly from a siding and partly from the station serving that siding for a single destination.
8. Trainload benefit shall be extended to trains originating from one point and terminating at two points provided that the two points are either the serving station and its siding or two sidings of the same serving station, or two sidings notified as independent booking points but operationally branched out from the same station.
9. For rake loaded with two or more commodities, the required number of total wagons as per Annexure I should be loaded with. In case more than one commodity is loaded in a wagon, freight will be charged at the higher class rate of the goods which the wagon contains. Maximum number of commodities loaded in wagons should not exceed two.
10. Indents for BCN groups of wagons and BCNHL wagons will be treated as interchangeable for the purpose of supply of rakes. Trainload rate conditions will be applicable as per type of stock supplied. The customer must place an indent for 42 BCN/58 BCNHL wagons.
11. Indents for BOST and BRN/BRNA/BRNAHS/BFNS wagons will be treated as interchangeable for the purpose of supply of rakes. However, Trainload rate conditions will be applicable as per type of stock supplied.

If 40 BCNs are booked from point 'A' with 25 BCNs destined for point 'B' and 15 BCNs for point 'C', the freight would be worked out as under:

- Calculate the freight at trainload class for 25 BCNs from point 'A' to point 'B'.
- Calculate the freight at trainload class for 15 BCNs from point 'A' to point 'C'.
- Total freight = (a) + (b).

B 15 BCN

A 25 BCNs

C

D 40 BCNs

If 25 BCNs are booked from point 'A' and 15 BCNs are booked from point 'B' and are combined to form full rake at point 'C' and move up to point 'D', the freight would be worked out as under:-

- Calculate the freight at trainload class for 25 BCNs from point 'A' to point 'D'.
- Calculate the freight at trainload class for 15 BCNs from point 'B' to point 'D'.
- Total freight = (a) + (b).

**Illustration-III**

A (25 BCNs)

B(15 BCNs)

C(40 BCNs)

If 25 BCNs are booked from point 'A' and 15 BCNs are booked from point 'B' and two parts of the rake are combined at point 'B' which is moved up to the destination point 'C', then the freight would be worked out as under:-

- Calculate the freight at trainload class for 25 BCNs from point 'A' to point 'C'.
- Calculate the freight at trainload class for 15 BCNs from point 'B' to point 'C'.
- Total freight = (a) + (b).

The freight for a two point rake from point 'C' to two points 'B' and 'A', in the reverse direction, will be calculated at trainload class in the same manner as given above.
